

Installation

Model specific instructions

For:

- **Moto Guzzi V85TT**

These instructions are a model specific add-on to the general BoosterPlug installation instructions.

The general BoosterPlug installation instructions can be found in the "Downloads" section on the BoosterPlug.com website:

<http://www.boosterplug.com/shop/cms-downloads.html>

Installation Tips

- The pictures below should help you locate the AIT sensor where the BoosterPlug is installed.
- The AIT sensor is found in the left side of the air filter box. (Red circle on the pictures)
- Install the BoosterPlug module as per the general installation papers.
- Route the BoosterPlug sensor to a position near one of the airbox intake holes in the top of the air filter box (Yellow circles in the pictures), and secure it with a zip-tie it to make sure it stays in the same position
 - Make sure the sensor tip does not touch any frame metal frame parts (You want it to measure air temperature, not the temperature of the metal frame).

Pictures

- **Moto Guzzi V85TT**

IMPORTANT NOTE:

The V85TT have a programming glitch in the ECU that prevents software updates when the BoosterPlug is installed.

So you will have to disconnect the BoosterPlug before having the bike serviced - otherwise the shop can not perform software updates.

When you get the bike back from service, you can connect the BoosterPlug again.
